

First choice by international accredited consultants and architect's for most worlds prestigious projects.

Pipe Hangers & Support Systems

Valves

FIRST AND ONLY COMPANY FROM INDIA TO
HAVE **UL AND FM** APPROVALS FOR PIPE
HANGERS AND SUPPORT SYSTEMS

Certificates

Certificate of Compliance

This certificate is issued for the following:

Pipe Hanger Components

Model CH – Clevis Hangers
Sizes 3/4, 1, 1-1/4 and 1-1/2 inch NPS

Model SH – Loop Hangers
Sizes 3/4, 1, 1-1/4, 1-1/2, 2 and 2-1/2 inch NPS

Model NCR – Pipe Clamp Hanger with Lining
Size 3/4 inch NPS

Prepared for:

Saketh Exim Pvt. Ltd.
Plot No. D 146/147 MIDC – Turbhe - TTC
Navi Mumbai, Maharashtra 400 703
India

Manufactured at:

Saketh Exim Pvt. Ltd.
Unit No. 1/B – Badrinath, Ground Floor
Tungareshwar Industrial Complex
Sativali Village, Vasai (East), Dist. Thane,
Maharashtra 401 208
India

FM Approvals Class: 1951, 1952, 1953

Approval Identification: 0003056409

Approval Granted: April 25, 2016

To verify the availability of the Approved product, please refer to www.approvalguide.com

Said Approval is subject to satisfactory field performance, continuing Surveillance Audits, and strict conformity to the constructions as shown in the Approval Guide, an online resource of FM Approvals.

INTRODUCTION

SAKETH EXIM is an Industrial Powerhouse with a dominant presence in Manufacturing and Fabrication of Metal Products used in Pipe Support Systems, HVAC Anti Vibration System and Equipments for Industrial, Commercial, Utility and OEM Installation. Saketh Exim is Young, Agile and responsive company which is constantly expanding its capabilities to fuel its fairy tale journey that has seen it grow its standards of Research, Design, Engineering and Manufacturing that go into each and every product that comprise our Pipe Hangers Products Line. Our customer have access to the most complete Support Systems offered in the Industry, including Pipe Hangers, Metal Framing, Cable Tray, Slotted Angle. Fasteners, Rubber Support Inserts, Threaded Bars and Anchors.

Saketh's products are listed by **Underwriter's Laboratory Inc. (U.S.A.) and FM Global Approved (U.S.A.) for Fire Sprinklers System Installations**. All Saketh products are manufactured to meet or exceed industry standards set for their design and manufacture.

Saketh products are produced in Five advanced and technologically most advanced modern plants. These facilities are located in Commercial Capital of the India i.e. Mumbai. Regional sales and distribution centre in United States, Gulf, Asian, Countries stocking standards products.

This catalogue is designed to be helpful to engineers and contractors in the application and selection of pipe hangers, support and HVAC for construction, maintenance, fire & safety.

If a unique application require a special products not included in this catalogue, Saketh engineer personnel are ready to furnish design consultation and realistic material estimates in addition, sales representative with engineering expertise are located throughout the United States, Gulf and Asian Countries through its net work of distributors for your convenience.

NOTICE

Saketh reserve the right to change the specification, materials and process or the availability of products at any time without prior notice. While every effort had been made to assure the accuracy of information contained in this catalogue at the time of publication, Saketh is not responsible for in accuracies resulting from undetected errors or omissions.

TECHNICAL DATA

MATERIALS

Carbon Steel

Carbon steel is used in the manufacture of Saketh pipe hangers and supports. Excellent strength characteristics and adaptability to cold forming provide a well engineered design. By cold forming the steel, mechanical properties are increased, adding to the structural integrity of the fabricated hanger.

Stainless Steel

AISI Type 304 and Type 316 are non-magnetic members of the austenitic stainless steel group.

Several conditions make the use of stainless steel ideal. These include reducing long term maintenance costs, high ambient temperatures, appearance, and stable structural properties such as yield strength, and high creep resistance.

CORROSION

All metal surfaces exposed to the environment are affected by corrosion. Depending on the physical properties of the metal and its proximity to other dissimilar metals, an electrochemical reaction may occur which causes an attack on the metal itself, resulting in corrosion. Chemical corrosion is limited to highly corrosive environments, high temperatures, or a combination of both.

FINISHES

Zinc Coatings

Protective zinc coatings are available on a number of pipe hangers and accessories in three basic forms:

Electro-galvanized, pre-galvanized, and hot-dip galvanized after fabrication. In all cases, the zinc protects the steel first as a sacrificial anode to repair bare areas on cut edges and gouges.

When exposed to air and moisture, zinc forms a tough, adherent protective film consisting of a mixture of zinc oxides, hydroxides, and carbonates. The corrosion resistance of zinc is directly related to its thickness and the environment. For example a 0.2 mil (5 µm) coating will last twice as long as a 0.1 mil (2.5 µm) coating in the same environment.

Electro-Galvanized

(ASTM B633 SC1 or SC3)

An electro-galvanized process deposits a coating of zinc on the steel by electrolysis from a bath of zinc salts. This coating is pure zinc and adheres to the steel with a molecular bond. A maximum of 0.5 mils (12.7 µm) of zinc can be applied by this method. This coating is recommended for in-door use in relatively dry areas.

Pre-Galvanized Zinc

(ASTM A653 Coating Designation G90)

Pre-galvanized zinc is produced by continuously rolling the steel coils or sheets through molten zinc at the steel mills. This is also known as "mill galvanized" or "hot-dipped mill galvanized". Coils are then slit to size for fabrication of pipe hangers. Coating thicknesses of G90, is 0.90 ounces per square foot (0.27 kg/m²) of steel surface.

Protection of cut edges with zinc coatings.

Cut edges and welded areas are not zinc coated; however, zinc near the uncoated metal becomes a sacrificial anode which protects the bare areas after a short period of time. Pre-galvanized steel is not generally recommended for use outdoors in industrial environments, but is suitable for extended exposure in dry or mildly corrosive atmospheres.

Hot-Dip Galvanized After Fabrication (ASTM A123)

After a pipe hanger or fitting has been fabricated, it is completely immersed in a bath of molten zinc. A metallurgical bond is formed, resulting in a zinc coating that completely coats all surfaces, including edges. Zinc coatings of this specification have a minimum thickness of 1.50 ounces per square foot (0.45 kg/m²) on each side or a total of 3.0 ounces per square foot (0.9 kg/m²) of steel.

Hot-dip galvanized after fabrication is recommended for outdoor exposure. For best results, a zinc rich paint (available from B-Line) should be applied to field cuts. The zinc rich paint will provide immediate protection for field cuts and eliminate the short time period for galvanic action to "heal" the damaged coating.

Plastic Coating

Some products offered by Saketh are plastic or vinyl coated for prevention of galvanic reaction between materials or for noise reduction. These coated products can also be used where contact between glass pipe and hanger is not desirable. Felt lined hangers may be substituted for same purpose.

Red Primer

A corrosion resistant metal primer containing rust inhibitive pigments.

Quality Assurance

Saketh's Quality Assurance Program has been developed and implemented for compliance to various industry standards and specifications.

General

Torque

The torque values in this catalog are to be used as a guide only. The relationship between the applied torque or torque wrench reading and the actual tension created in the bolt may be substantially different. Important factors affecting torque-tension relationships include friction under the bolt head or nut, hole tolerances, and torque wrench tolerances. Accuracy of many commercial torque wrenches may vary as much as plus or minus 25%.

Charts and Tables

Charts and tables in this section are compiled from information published by nationally recognized organizations and are intended for use as a guide only. Saketh recommends that users of this information determine the validity of such information as applied to their own applications.

Saketh reserves the right to make specification changes without notice.

SECTION 15140 - PIPE HANGERS AND SUPPORTS

Part I—GENERAL

1.01 SECTION INCLUDES

- A. The work covered under this section consists of the furnishing of all necessary labor, supervision, materials, equipment, and services to completely execute the pipe hanger and supports as described in this specification.

1.02 REFERENCES

- A. ASTM B633 - Specification for Electrodeposited Coatings of Zinc on Iron and Steel.
- B. ASTM A123 - Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
- C. ASTM A653 - Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
- D. ASTM A1011 - Specification for Steel, Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy, and High-Strength Low-Alloy with Improved Formability.
- E. ANSI/MSS SP-58 - Manufacturers Standardization Society: Pipe Hangers and Supports - Materials, Design, and Manufacture.
- F. ANSI/MSS SP-69 - Manufacturers Standardization Society: Pipe Hangers and Supports - Selection and Application.
- G. NFPA 13 - Installation of Sprinkler Systems.

1.03 QUALITY ASSURANCE

- A. Hangers and supports used in fire protection piping systems shall be listed and labeled by Underwriters Laboratories FM APPROVALS.
- B. Steel pipe hangers and supports shall have the manufacturer's BRAND name Tembo Sevenstar / Eitalia, and applicable size stamped in the part itself for identification.
- C. Hangers and supports shall be designed and manufactured in conformance with ANSI/MSS SP-58.
- D. Supports for sprinkler piping shall be in conformance with NFPA 13.

1.04 SUBMITTALS

- A. Submit product data on all hanger and support devices, including shields and attachment methods. Product data to include, but not limited to materials, finishes, approvals, load ratings, and dimensional information.

Part II – PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

- A. Manufacturer: Subject to compliance with these specifications, pipe hanger and support systems shall be as manufactured by Saketh Exim Pvt. Ltd.

2.02 PIPE HANGERS AND SUPPORTS

A. HANGERS

1. Uninsulated pipes 2 inches and smaller:
 - a. Sprinkler Hanger.
 - b. Pipe Hanger.
 - c. Clevis Hanger.

B. VERTICAL SUPPORTS

1. Steel Riser Clamp sized to fit outside diameter of pipe.

C. COPPER TUBING SUPPORTS

1. Hangers shall be sized to fit copper tubing outside diameters.
 - a. Sprinkler Hanger.
 - b. Pipe Hanger.
 - c. Clevis Hanger.

D. SUPPLEMENTARY STRUCTURAL SUPPORTS

1. Design and fabricate supports using structural quality steel bolted framing materials as manufactured by Saketh. Channels shall be roll formed, 12 gauge ASTM A1011 SS Grade 33 steel, 15/8" x 15/8" or greater as required by loading conditions. Submit designs for pipe tunnels, pipe galleries, etc., to engineer for approval. Use clamps and fittings designed for use with the strut system.

2.04 UPPER ATTACHMENTS

A. BEAM CLAMPS

1. Beam clamps shall be used where piping is to be suspended from building steel. Clamp type shall be selected on the basis of load to be supported, and load configuration.
2. C-Clamps shall have locknuts and cup point set screws.
3. Center loaded beam clamps shall be used where specified.

B. CONCRETE INSERTS

1. Cast in place spot concrete inserts shall be used where applicable; either steel or malleable iron body. Spot inserts shall allow for lateral adjustment and have means for attachment to forms. Select insert nuts to suit threaded hanger rod sizes.
2. Continuous concrete inserts shall be used where applicable. Channels shall be 12 gauge, ASTM A 1011 SS Grade 33 structural quality carbon steel, complete with Styrofoam inserts and end caps with nail holes for attachment to forms. The continuous concrete insert shall have a load rating of 2,000 lbs/ft. suitable for strut and rod sizes.

2.05 VIBRATION ISOLATION AND SUPPORTS

- A. For refrigeration, air conditioning, hydraulic, pneumatic, and other vibrating system applications, uses a clamp that has a vibration dampening insert and a nylon inserted locknut.
- B. For larger tubing or piping subjected to vibration, use neoprene or spring hangers as required.
- C. For base mounted equipment use vibration pads, molded neoprene mounts, or spring mounts as required.
- D. Vibration isolation products are manufactured by Saketh Exim Pvt. Ltd.

2.06 ACCESSORIES

- A. Hanger rods shall be threaded both ends. Or continuous threaded rods of circular cross section. Use adjusting locknuts at upper attachments and hangers.
No wire, chain, or perforated straps are allowed.
- B. Shields shall be 180° galvanized sheet metal, 12 inch minimum length, 18 gauge minimum thickness, designed to match outside diameter of the insulated pipe.
- C. Pipe protection saddles shall be formed from carbon steel, 1/8 inch minimum thickness, sized for insulation thickness. Saddles for pipe sizes greater than 12 inch shall have a center support rib.

2.07 FINISHES

INDOOR FINISHES

- A. Hangers and clamps for support of bare copper piping shall be coated with copper colored epoxy paint. Additionally a plastic coating or a felt lining in hanger can be used.
- B. Hangers for other than bare copper pipe shall be zinc plated in accordance with ASTM B633-SC3.
- C. Strut channels shall be pre-galvanized in accordance with ASTM A653 G90 or have an electro-deposited green epoxy finish.

OUTDOOR AND CORROSIVE AREA FINISHES

- D. Hangers and strut located outdoors shall be hot dip galvanized after fabrication in accordance with ASTM A123. All hanger hardware shall be hot-dip galvanized or stainless steel. Zinc plated hardware is not acceptable for outdoor or corrosive use.
- E. Hangers and strut located in corrosive areas shall be Type 304 (316) stainless steel with stainless steel hardware.

Pipe Hangers

Pipe
Hangers

CLEVIS HANGER

APPLICATION:

A CLEVIS HANGER provides for sizeable loads to be supported and for an elevation adjustment depending upon the pipe diameter. The lower nut adjusts the piping to the proper elevation and the upper nut, when locked into position, prevents loosening due to vibration.

CONSTRUCTION:

A CLEVIS HANGER consists of a yoke and a support strap made from shaped carbon steel strip and a joining bolt. 15° swing in either direction allows pipe to easily feed through. Pipe will not pinch when installing. Engineered design aligns bolt holes for quicker overhead installation.

MATERIAL:

Carbon Steel. Also other materials can also be provided on request

APPROVALS:

Underwriter's Laboratory (UL)

Factory Mutual's (FM)

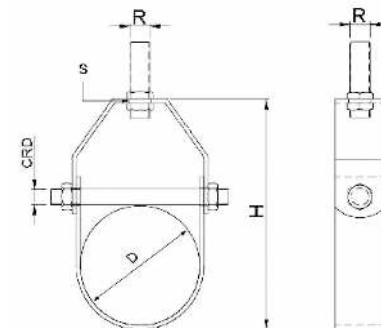

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 1)

Federal Specification WW-H-171E & A-A-1192A (Type 1)

MAXIMUM TEMPERATURE: 343°C (650°F)

FINISH AVAILABLE:

Plain, Hot Dip Galvanized, Electro-Galvanized.

SPRINKLER HANGER

APPLICATION:

A SPRINKLER HANGER recommended to provide vertical support to non insulated piping systems. By adjusting the position of the sprinkler nut on the hanger rod at the top of the hanger, pipe elevation can be altered.

CONSTRUCTION:

A SPRINKLER HANGER consists of a piece of carbon steel shaped to support pipe. Gives Double thickness at the support. Most suitable for fire extinguishing pipes installation.

MATERIAL:

Carbon Steel. Also other materials can also be provided on request

MAXIMUM TEMPERATURE:

343°C (650°F)

APPROVALS:

Underwriter's Laboratories (UL)

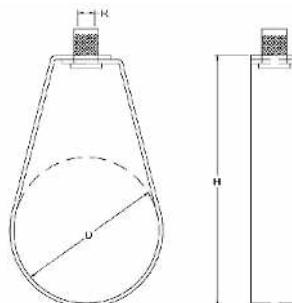

Factory Mutual Approved (FM)

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type10)

Federal Specification WW-H-171E & A-A-1192A (Type 10)

FINISH AVAILABLE:

Plain, Hot Dip Galvanized, Electro-Galvanized.

PIPE HANGER WITH EPDM LINING

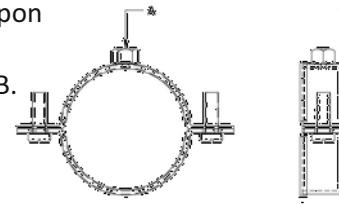

APPLICATION:

PIPE HANGER WITH EPDM LINING is recommended for non-insulated stationary pipelines in a horizontal position. It can be used for supporting pipes along roof.

CONSTRUCTION:

PIPE HANGER with EPDM lining consists of piece carbon steel shaped to wrap around the pipe, made from shaped carbon steel plate. The selection of the proper PIPE HANGER WITH EPDM LINING depends upon the temperature of the piping system and load to be carried. Permits installation before and after pipe is in place. Reduces noise upto 18 dB.

MATERIAL:

Carbon Steel. Also other materials can also be provided on request

APPROVALS:

PIPE HANGER WITHOUT LINING

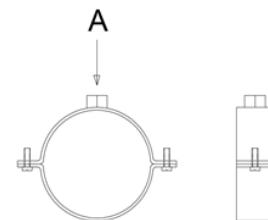

APPLICATION:

PIPE HANGER is recommended for non-insulated stationary pipe lines in either a horizontal or vertical position. It can be used for supporting pipes along roof as well as along wall.

CONSTRUCTION:

PIPE HANGER consists of piece of carbon steel shaped to wrap around the pipe, made from shaped carbon steel plate. The selection of the PIPE CLAMP depends upon the temperature of piping system and load to be carried. Pipe hanger permits installation before and after pipe is placed.

MATERIAL:

Steel. Also other materials can also be provided on request.

APPROVALS:

Underwriter's Laboratories Listed (UL)

Factory Mutual (FM)

Manufacturers Standardization Society ANSI/MSS SP-69 & SP - 58 (Type 58)

Federal Specification WW-H-171E & A-A-1192A (Type 25)

MAXIMUM TEMPERATURE:

343°C (650°F)

FINISH AVAILABLE:

Plain, Hot dipped Galvanized, Electro-Galvanized.

PIPE HANGER WITH EPDM LINING

APPLICATION: PIPE HANGER WITH EPDM LINING is recommended for non-insulated stationary pipelines in a horizontal position. It can be used for supporting pipes along roof.

CONSTRUCTION: PIPE HANGER with EPDM lining consists of piece carbon steel shaped to wrap around the pipe, made from shaped carbon steel plate. The selection of the proper PIPE HANGER WITH EPDM LINING depends upon the temperature of the piping system and load to be carried. Permits installation before and after pipe is in place. Reduces noise upto 18 dB.

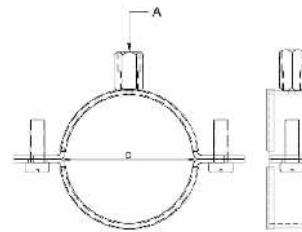

MATERIAL: Carbon Steel. Also other materials can also be provided on request

APPROVALS:

- Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 12)
- Federal Specification WW-H-171E & A-A-1192A (Type25)

TEMPERATURE RANGE: -20°C 110°C

FINISH AVAILABLE: Plain, Hot Dip Galvanized, Electro-Galvanized.

PIPE HANGER – HEAVY DUTY

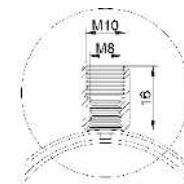

APPLICATION:

HEAVY DUTY PIPE HANGER is recommended for non-insulated stationary heavy pipe lines in either a horizontal or vertical position. It can be used for supporting pipes along roof as well as along wall. Used where loads to be carried are larger in magnitude.

CONSTRUCTION:

HEAVY DUTY PIPE HANGER consists of piece carbon steel shaped to wrap around the pipe, made from shaped carbon steel plate. Quick – Locking permits simple and fast installation. Large opening angles for easy insertion of the pipes. Clamping range without gaps. Reduces noise upto 18 dB.

MATERIAL: Steel. Also other materials can also be provided on request

APPROVAL: Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 12)

Federal Specification WW-H-171E & A-A-1192A (Type25)

MAXIMUM TEMPERATURE: 110°C

MINIMUM TEMPERATURE: -20°C

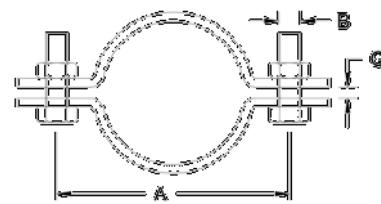

FINISH AVAILABLE: Plain, Hot Dip Galvanized, Electro-Galvanized.

RISER CLAMP

APPLICATION:

RISER CLAMPS are recommended for the support and/or restraint of vertical steel pipes. A RISER CLAMP is designed to attach to the pipe and to rest on a structural member or floor; it is not designed to have hanger rods attached to it to support the pipe.

CONSTRUCTION:

RISER CLAMPS consists of two carbon steel flat bars bent to shape and held together by two bolts. Designed to act as a rigid support or guide for vertical pipes. The clamp should be bolted to the pipe just below support lugs or other attachments that can carry a shear load.

MATERIAL:

Steel. Also other materials can also be provided on request

APPROVALS:

Underwriters Laboratories (**UL**)

Factory Mutual (**FM**)

RISER CLAMP – FOUR BOLTS

APPLICATION:

FOUR BOLT RISER CLAMPS are recommended for the support and/or restraint of more heavy vertical steel pipes. A RISER CLAMP with four bolts is designed to attach to the pipe and to rest on a structural member or floor; it is not designed to have hanger rods attached to it to support the pipe.

CONSTRUCTION:

RISER CLAMPS WITH FOUR BOLTS consists of two carbon steel flat bars bent to shape and held together by four bolts.

MATERIAL:

Steel. Also other materials can also be provided on request

APPROVALS:

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58

(Type ##)

APPLICATION: A Standard Pipe Strap is recommended for supporting a piping system with fittings vertically or horizontally to walls or ceilings. It can be used as a restrainer when installed on top of structural wood beams for beam, for limiting pipe movements due to thrust loads during sprinkler system start-up.

CONSTRUCTION: A Standard Pipe Strap consists of a piece of carbon steel shaped to hold the pipe down to walls or ceilings.

MATERIALS: Steel. Also other materials can also be provided on request

U BOLT

APPLICATION:

U-Bolts are used to secure piping to structural members. When the piping is below the structural member, the U-Bolt provides vertical support and restricts lateral movement while allowing for axial movement. When the piping system is above the structural member, the U-Bolt restricts lateral movement and upward movement while allowing axial movement of the piping.

CONSTRUCTION:

U-Bolt is provided with four standard hex nuts and has a longer straight threaded length.

MATERIALS:

Steel. Also other materials can also be provided on request

HALF SADDLE

APPLICATION:

Recommended for support of standard conduit, cable and steel pipe on walls or sides of beams. Not recommended for use horizontally on ceilings, bottoms of beams and similar installations since the factor of safety is greatly reduced when so used.

CONSTRUCTION:

HALF SADDLE consists of piece of steel shaped to proper configuration as shown in above diagram.

**MATERIAL:**

Steel. Also other materials can also be provided on request

APPROVALS:**MAXIMUM TEMPERATURE:**

343°C (650°F)

FINISH AVAILABLE:

Plain, Hot Dip Galvanized, Electro-Galvanized.

HEAVY SADDLE

APPLICATION:

Recommended for supporting a piping system of heavy weight with fittings vertically or horizontally to walls or ceilings. It can be used to mount electrical & insulated pipes, corner locking and better gripping of electrical conduits.

CONSTRUCTION:

A HEAVY SADDLE consists of piece of steel shaped to the proper configuration as shown in the diagram.

MATERIALS:

Steel. Also other materials can also be provided on request

APPROVALS:

MAXIMUM TEMP:

343°C (650°F)

FINISH AVAILABLE:

Plain, Hot Dip Galvanized, Electro-Galvanized.

OFFSET HANGER

APPLICATION:

Recommended for support of pipe lines running at a definite distance from the wall or floor of a building or structure. Used where removing and installing of pipe is done periodically.

CONSTRUCTION:

An OFFSET HANGER consists of piece of steel shaped to the proper configuration.

MATERIALS:

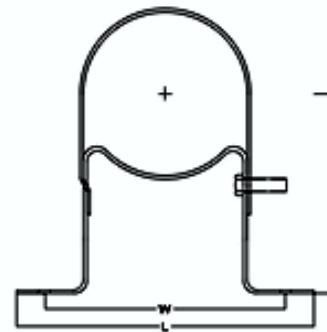

Steel. Also other materials can also be provided on request

APPROVALS:
MAXIMUM TEMP:

343°C (650°F)

FINISH AVAILABLE:

Plain, Hot Dip Galvanized, Electro-Galvanized.

TWO PIECE CHANNEL CLIP (STRUT PIPE | TUBE CLAMP / STRUT MOUNTING PIPE GUIDE)

APPLICATION:

Designed as a guide to permit longitudinal movement of pipe.

MATERIALS:

Steel. Also other materials can also be provided on request

FINISH AVAILABLE:

Plain, Hot Dip Galvanized, Electro-Galvanized.

BRACKET FOR U BOLT

APPLICATION: Designed to install U Bolts on wall or floor.

Brackets helps to maintain distance between wall surface and pipeline.

MATERIALS: Steel. Also other materials can also be provided on request

FINISH AVAILABLE: Plain, Hot Dip Galvanized, Electro-Galvanized.

SIZES: 4"X2", 5"X2", 6"X2", 8"X2", 8"X4", 10"X2"

Note: Any non standard size also can manufacture.

SUPPORT CHANNELS

MATERIALS: Steel. Also other materials can also be provided on request

FINISH AVAILABLE: Plain, Hot Dip Galvanized, Electro-Galvanized.

SIZES: 4' X 2", 4' X 4"

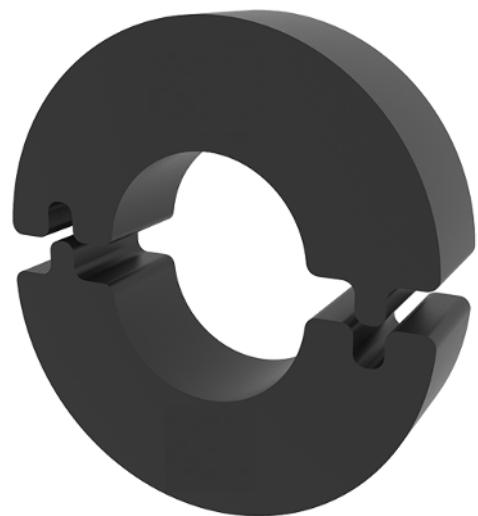

Note: Any non standard size also can manufacture.

RUBBER SUPPORT INSERTS

RUBBER SUPPORT INSERT

APPLICATION:

Recommended to use at the supporting points of insulated pipes to prevent crushing of insulation.

CONSTRUCTION:

Dimensionally accurate as each piece is moulded. It has excellent resistance to deterioration/ distortion. Steel reinforcement gives higher strength and load bearing capacity.

MATERIAL:

DENSITY: 1400kg/m³

THERMAL CONDUCTIVITY:

0.16W/m°C

MAXIMUM TEMPERATURE:

110°C

MINIMUM TEMPERATURE:

-20°C

NOTES

Anti-Vibration Products

Anti-Vibration
Products

SPRING HANGER

Features:-

Spring Hangers consist of freestanding; laterally stable steel springs in series with a moulded elastomeric element assemble into a stamped and welded hanger bracket. The hanger brackets and the springs are powder coated. Spring Vibration isolation hangers are designed to provide high efficiency isolation from structure-borne vibration and noise. Springs are colour-coded according to load ratings and are designed for 50% overload.

Applications:-

Hangers are used to isolate suspended sources of both noise and vibration. Suspended mechanical equipment such as air handling units, FCU's cabinet fans, piping and ductwork in close proximity to rotating mechanical equipment are typical applications of model hangers.

- Due to policy of continual improvement, the specifications are subject to change without prior notice
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting.
- Compliance – Springs designed according to BS 1726 (Part 1) : 1987 and recommendations made by SAE (US)

CLOSED SPRING MOUNT

Design Features:-

- Colour coded spring to facilitate identification.
- Powder coated springs.
- Load upto 5000 kgs.
- Deflection upto 25mm.
- 4 Models
- 26 Load Ranges
- Deflection is at rated load with 15% Tolerances
- All mounts have approximately 50% over load capacity.
- Unique mount design provides horizontal stability, high loading capacity and protective spring enclosure.
- All Mounts have external leveling casing arrangement, capable of compensating for full static deflection.
- Inner walls of lower casing have resilient rubber snubbers which
 - Eliminates possibility of binding by providing a smooth guide path for the top casing
 - Limits lateral movement, particularly due to start up, start – up, shut – down and horizontal wind load
- Prevents isolator short – circuiting by avoiding metal to metal contact.
- Neoprene inserts below springs and 6 mm thick ribbed base pad act as noise breaks for high frequencies in the audible range, which can otherwise get transmitted to building structure.
- Mounting must be adjusted so that upper housing clears lower housing by at least 6 mm and not more than 12 mm

Typical Application:-

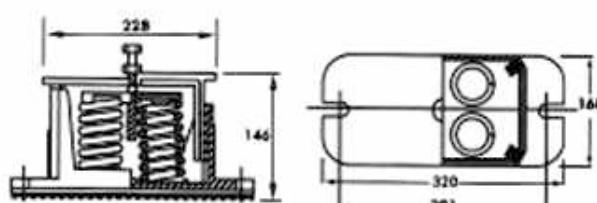

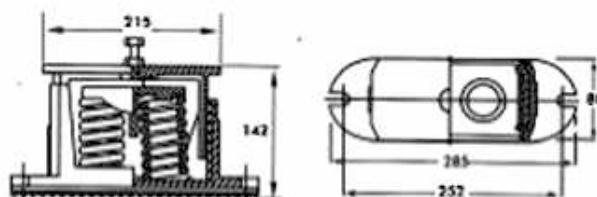

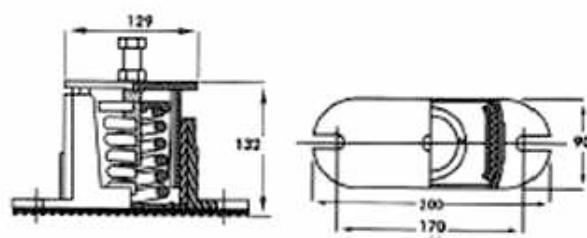

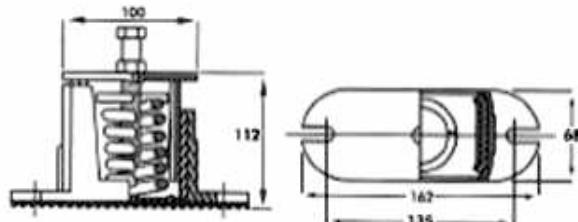

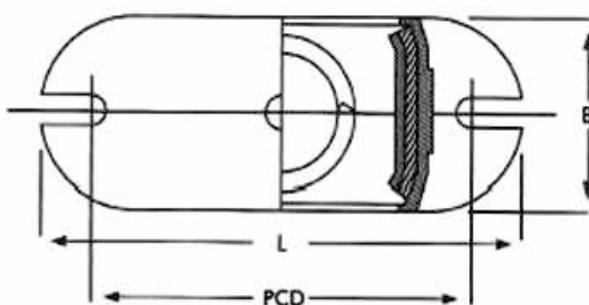

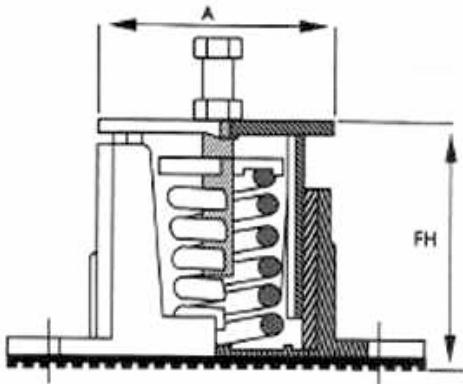

Application examples include – Chillers. AHU'S pumps, centrifugal / Axial Fans, Condensing Units, Rooftop Packaged units, Reciprocating compressors , DG sets , Punch presses, Drop Hammers, Floor Pipe supports

(Normally at first few pipe supports points leading from isolated equipments.

Note –

- Custom load and deflection are also available.
- Compliance – Springs designed according to BS 1726 (Part 1) : 1987 and recommendations made by SAE (US)

Compliance – spring designed according to BS 1726 (PART 1): 1987 and recommendations made by SAE (US)

SINGLE ARCH EXPANSION JOINT

DESIGN FEATURES :

- Greater Movements
- Higher Pressure Ratings
- No gaskets required
- Absorbs & Isolates Vibrations/Noise/shock
- Reduces System Noise
- Absorbs pipe Movement/Stress.
- Compensates for Misalignment/Offset
- Available with tie rod assembly

Temperature Ratings:-

- | | |
|----------|-------------------|
| Standard | (-) 10° to 70° C |
| Special | (-) 10° to 150° C |
- * Expansion Joints for special applications in different Polymers and Pressure ratings available as per customer specifications.

- Flange Drilling to: BS 10 Table D/E/F, ANSI B16.5 125 / 150 or as per customer requirement
- Higher Pressure Ratings and Movement Capabilities Available.
- Expansion Joints are available in a variety of polymers for different applications duty conditions.
- Vacuums – 26 inches of Hg

FLOATING FLANGE EXPANSION JOINT

This Type Rubber Expansion Joint is a totally effective Saketh's solution for unwanted vibration in heating and air conditioning systems. Available in the common HVAC, Plumbing and Fire Fighting pipeline sizes, it is ideal for motion compensation, vibration elimination, and noise control and stress relief.

Manufactured to a fully moulded spherical design the style has a high pressure rating with the added benefit of a non-clogging, long radius Arch. Available in Natural rubber and many different polymers like EPDM, Neoprene, Nitrile, and Butyl having a wide range of flange drilling standards to your building services requirements.

Type **Floating Flange is designed** as per the latest International Standards of FSA and EJMA (USA) which are used all over the world. Further, the most beneficial advantage is that if replacement is required it can be replaced without distributing the welded flange due to floating/rotating flange design.

Size I.D (mm)	Standard F/F length (mm)	Operating Condition				Expression Joints Style
		Axial Comp'n (mm)	Elongation (mm)	Lateral (mm)	Angular Degrees	
25	150	13	12	13	15°	SI 400

Temperature/Pressure Ratings:-

Maximum Temperature Maximum Pressure Vacuum Rating	115°C (Neoprene/EPDM) 16 bar Full vacuum (26" Hg)
Working pressure depends on temperature and at higher temperature and at higher temperature, the pressure ratings are reduced slightly	

Flange Drilling To

BS Table D / E / F ANSI B16.5 Class 125 / 150 BS 4504 / DIN 2501 or as per customer requirement

Elastomers

Neoprene – Provides excellent resistance to oxidation, ozone and sunlight ageing. Good resistance to oil.

EPDM

Good for hot and cold water service and chemicals.

Flanges

'Expansion joints are furnished with zinc plated steel flanges. They rotate easily on the bellow which allows for simple bolt alignment.

Control Units

Tie rods and gusset plates are normally recommended and can be supplied along with the bellows.

Warning: Control unit must be used unless piping is properly anchored. When Expansion joints are installed in pipelines or equipment carrying fluids and gases at elevated temperatures and pressures, precautions should be taken to ensure proper installation and regular inspection. Care is required to protect personnel in the event of leakage or splash.

Note: Maximum pressures rating is based on 40°C operating temperature.

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.

ANTI VIBRATION PADS

RIBBED MOUNTING PAD

Specifications:

- Alternate High/ Low Ribbed Construction.
- Easy to Cut.
- Pads can be cut slightly larger than the size of leg of machines using shear or knife
- Easy Field Installation.
- Multiple layers of Ribbed Mounting Pad can be used to increase deflection.

Size (Inches)	Load(PSI)	Load (kg/cm ²)
3/8" x 18" x 18"	12960	911
3/8" x 12" x 12"	5760	404
3/8" x 8" x 8"	2560	180
3/8" x 6" x 6"	1440	101
3/8" x 4" x 4"	640	45
3/8" x 3" x 3"	360	25

WAFFLE PADS

Specifications:

- Designed within built suction cups.
- Easy Cut design without tools allows job site flexibility
- No need for bolting.
- Easy field Installation.

Size (Inches)	Load(PSI)	Load (kg/cm ²)
3/8" x 18" x 18"	12960	911
3/8" x 12" x 12"	5760	404
3/8" x 8" x 8"	2560	180
3/8" x 6" x 6"	1440	101
3/8" x 4" x 4"	640	45
3/8" x 3" x 3"	360	25

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting.

CORK SANDWICH PADS

Specifications:-

- Cork sandwich Pads are laminated pads having 1/2" thick close grained cork securely bonded between two layers of 1/4" alternate low high ribbed Neoprene rubber pads.
- Offers highest level of sound attenuation and vibration isolation.
- No need for bolting.

Size (inches)	Load (PSI)	Load (kg/cm ²)
7/8" X 18" X 18"	16200	1139
7/8" X 12" X 12"	7200	506
7/8" X 8" X 8"	3200	225
7/8" X 6" X 6"	100	126
7/8" X 4" X 4"	860	56
7/8" X 3" X 3"	450	31

METAL SANDWICH PADS

Specifications:-

- Metal Sandwich Pads are constructed of a steel plate bonded
- Ribbed Anti Vibration Pads.
- Designed for very high load capacity.

Size (inches)	Load (PSI)	Load (kg/cm ²)
1" X 18" X 18"	19440	1368
1" X 12" X 12"	8640	607
1" X 8" X 8"	3840	270
3/4" X 6" X 6"	2160	152
3/4" X 4" X 4"	960	67
3/4" X 3" X 3"	540	38

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting.

TURRET MOUNT

SITM rubber mountings are designed to provide superior attenuation of medium to high frequency vibration and noise emanating from wide range of motor driven machines particularly axial and centrifugal fans, high resilience rubber with low dynamic to static stiffness ratio ensures maximum efficiency, good creep performance and long service life.

Design Features:

- Moulded in first grade natural rubber with integral steel base and upper fixing boss.
- Also available with oil & environment resistant durable neoprene/Nitrile Rubber.
- Manufactured in three sizes, each available in three rubber compounds identified by a colour three rubber compounds identified by a colour spot.
- Static deflections of up to 8mm with loads from 5kg to 400 kg.

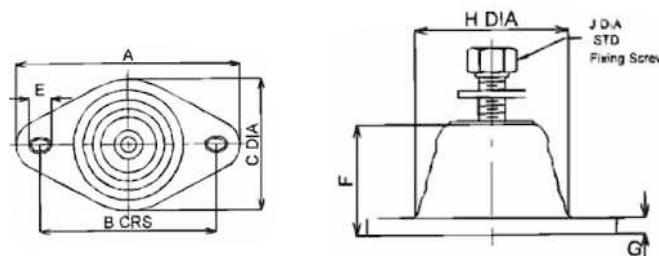

Typical Applications:

- Axial and Centrifugal Fans
- Air Handling Units
- Air Conditioning equipments
- Packaged Air Conditioners
- Floating Floors
- Generators & Mobile Equipments
- Pumps & Refrigeration Plants
- Rotary and Multi Cylinder Compressors.

NOTE: Turret mountings should not be used on machines exhibiting high out of balance forces without restraining bolt.

TECHNICAL SPECIFICATION :

Product Code	Colour Code	Rate load	Deflection at Rate	Nominal Dimension (mm)									Approx Wt. (kg)

SETM 102.Y	YELLOW	150											
SETM 102.B	BLUE	260											
SETM 102.R	RED	400											

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting

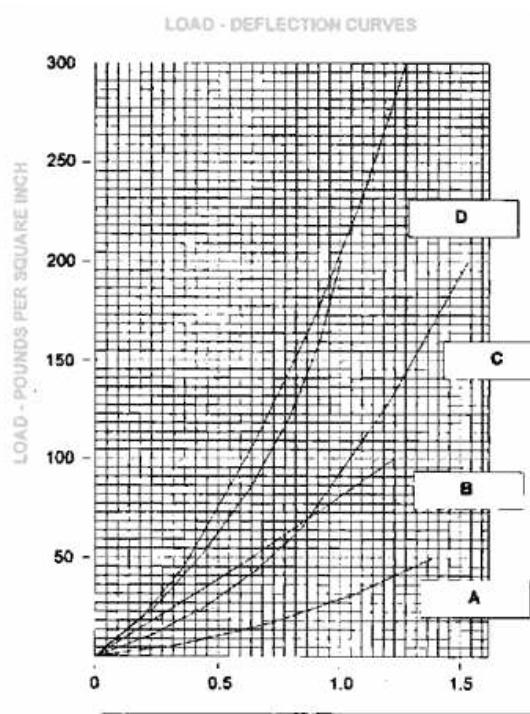

**Selection Procedure:**

- Compute the total load in kg. To be supported by Saketh's Pads. This includes machine weight and work load it carries and also concrete or steel base or inertia block if used.
- Determine unit loading to suit type of machine and supporting ground structure.
- Divide the static weight by unit load to get total area of Saketh's Pad that is required.
- Arrange the total area of into adequate number of pads that are necessary to give stable support and to avoid base distortion. The area of each pad should be in proportion to the load carried by it so that the unit loading or stress on all pads will be approximately the same.
- The pads should be placed in such way that uniform deflection is obtained. Uniform load distribution prevents over loading and possible premature failure of some of the mountings, prevents sagging and enables the machine to maintain the normal horizontal position and make maximum isolation possible.

Features:

- Scientifically designed resilient material that isolates shock and all the six modes of Vibration and reduce acoustic noise.
 - They give more deflection than any other material i.e. cork, felt etc.
 - They are cheaper than metal springs and have greater sound insulation ability.
 - They are highly resistant to oil, cleaning compounds, dirt, water, strength, heat aging and fatigue.
 - These are mostly used for machine tools, production equipments, heating and ventilation equipments, pumps, generators, compressors, air handling units, under heavy concrete bases, electronics or sensitive laboratory apparatus, business machines, computers and data processor etc.
 - Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.

CUP SPRING MOUNT

Applications:

SICUS Cup Spring isolators are recommended for use in isolating sources of noise and vibration located near critically quiet areas. They are highly effective for control of both high and low frequency vibration produced by reciprocating refrigeration compressors, pumps, packaged air-handling and air-conditioning equipment, centrifugal and axial fans, inertia bases, internal bases, internal combustion engines etc.

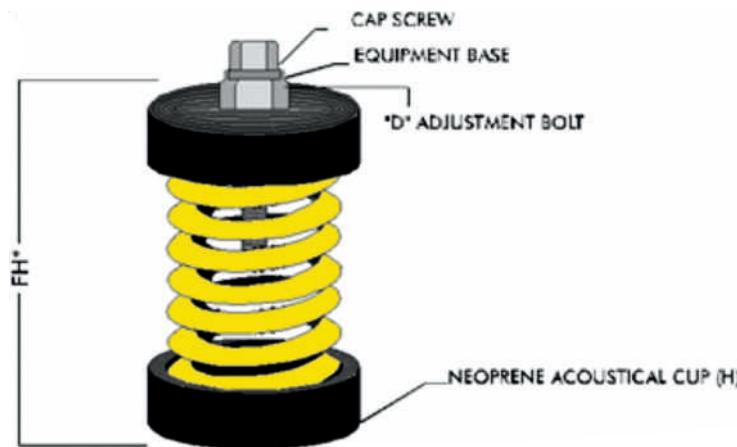

Features:

- Laterally stable springs with neoprene tap and base.
- Colour – coded springs according to load ratings.
- Non-skid bolt down base.
- Plated leveling / lock bolt.
- Isolates low frequency vibration.
- Springs are designed for 50% overload capacity.

- To achieve good sound suppressions do not over load fitting.

ENCLOSED SPRING ISOLATOR

Specifications:

A unique range of spring mountings are designed primarily for building services applications where the control of low frequency vibrations and noise emanating from mechanical plants is of paramount importance. The benefits of a combined rubber and steel housing for the spring have helped establish the Enclosed Spring Isolator mount as an industry standard accepted by specifier, equipment manufacturers and mechanical services installers.

Design Feature:

- Nitrile rubber (oil resistant) lower spring housing eliminates the possibility of metallic continuity and ensures excellent acoustic performance.
- Full enclosed captive assembly protects the spring and controls transient motion.
- All steel components are zinc plated.
- Nominal 25 & 50 mm deflection colour helical steel springs to BS 1726 Class B
- Laterally Stable Springs with 50% overload capacity.
- Simple single screw height adjustment.
- Ribbed Rubber pads on base.
- Colour coded for easy identification Spring
- Stainless Steel and Zinc Electroplated variants available.

Typical Application:

- Axial and Centrifugal Fans
- Air Handling Units
- Chillers and Cooling Towers
- Rotary and Multi Cylinder Compressor

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting.
- Compliance – Springs designed according to BS 1726 (Part 1) : 1987 and recommendations made by SAE (US)

OPEN SPRING MOUNTINGS

This unique range of open spring mounting uses an integral rubber and fixing of the spring which sets them apart from all other designs. Loose spring and plats are now history and high frequency and noise attenuation is provided regardless of whether rubber seating pad is used or not.

Originally designed for use with type IPF inertia pouring frames the mountings are now widely used to isolate vibration from every conceivable type of rotating and reciprocating machine. Some examples being air handing units axial and centrifugal fans, low level pipe work. Ductwork condensing units, pumps generating sets, chillers, etc. where control of transient motion is required open spring mountings can be used in conjunction with our viscous dampers type.

Design Features:

- Unique expanding rubber and fixing of spring which also provides high frequency attenuation
- Nominal 20, 25 & 50 mm deflection colour code spring with 50% overload capacity.
- Can be bolted to supporting structure or free standing on 6 mm thick rubber pad.
- Fully height adjustable
- Zinc plated metals
- No snubbing gives maximum efficiency.

CLOSED SPRING ISOLATOR

Introduction:-

This unique range of Closed Spring Isolators uses an integral rubber end fixing of the spring which sets them apart from all other designs. Loose springs and plates are now history and high frequency and noise attenuation is provided with stable mounting.

Originally designed for use for Isolation of heavy equipment the Closed Spring Isolators are now widely used to isolate vibration from every conceivable type of rotating and reciprocating machine. Some examples being big Cooling Towers, Heavy Centrifugal Fans, Heavy Condensing Units, Pumps, Generating Sets, Chillers etc.

These Closed Spring Isolators are cost effective and are a much cheaper option compared to our spring and Viscous Dampers.

Features:-

- Unique expanding rubber and fixing of spring which also provides high frequency attenuation.
- 25mm deflection colour coded springs with 50% overload capacity.
- Can be bolted to supporting structure or free standing on 6mm thick ribbed rubber pad.
- Fully height adjustable.
- Powder Coated Springs & Body.
- No snubbing gives maximum efficiency.

Application:-

- Heavy Blowers
- Generating sets
- Heavy Presses
- Centrifuges
- Cooling Towers
- Drop Hammers
- Large Machinery
- Building Foundations

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting.
- Compliance – Springs designed according to BS 1726 (Part 1) : 1987 and recommendations made by SAE (US)

INERTIA BASE

Introduction:-

Inertia Base should be used where the machine to be vibration isolated produces large unbalanced forces which would result in excessive motion if supported directly on spring or rubber based isolators. They should also be used where the machine is subject to external forces or is inherently unstable.

Saketh's Inertia Base come in several standard sizes as listed in our catalogue. However these bases can also manufactured to any size and specifications, even for heavier and more complex vibration isolation would normally recommend 6 isolators or more for exceptionally large bases.

Examples of equipment requiring Inertia Base are as follows:-

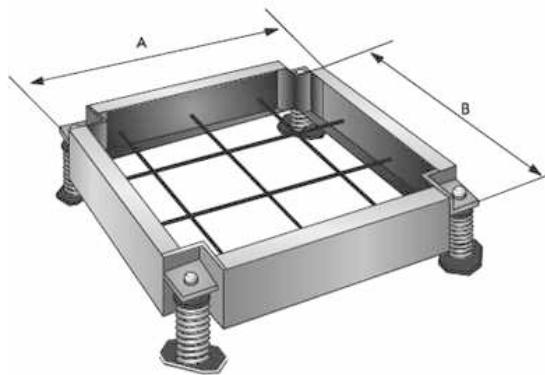

- Reciprocating Compressors
- Diesel Generating Sets
- Engine / Dynamometer Test Rigs
- Refrigeration Plants
- Pumps (Particularly Belt Driven Types)

Features:-

- Fully welded steel construction with integral concrete reinforcement fixed at 40 mm above bottom of frame.
- Recessed height reducing corner brackets designed to accept standard Saketh's type SIOS open spring mountings.
- Range of standard size frames available in three thicknesses 150, 200, 300 & 350 mm.
Frame thicknesses not less than L/12 where 'L' is the longest side of the frame.
- Finished with a single coat of red oxide primer on external surface only.

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good sound suppressions do not over load fitting.

TECHNICAL SPECIFICATIONS

Ordering Information required:-

- Equipment Model / Make
- HP/ RPM Of motor
- Static weight of equipment.
- Operating / Dynamic weight of equipment
- Outside Dimensions LXB XH
- Concrete Plinth Y/N.
- Height / Space constraint if any
- Required Deflection offspring(25 mm /50mm)
- Location- Ground / Roof / Basement.

Notes:-

Frame weights include concrete density at 2400 kg/m³ and mounting selections are base allowing 50 % additional weight for the equipment to be supported Nominal 25 mm deflection type (open Spring Isolators) have been listed, however the exact deflection will vary depending on the applied load. When ordering bases should be specified as follows – 150 – 600 X 900 other size .Type and Thickness required and plan dimensions commencing with smallest length. Mounting should also be listed e.g. “25/100–BULE”

Important:-

The equipment should be located on the base such that the load is evenly distributed over the 4 mountings. Equipment and ancillary parts should not overhang frame and hold down bolts must not be at a distance less than 100 mm from the outer edge of the base.

All the connections to the equipment should incorporate flexible sections and pipe work etc. must be independently supported.

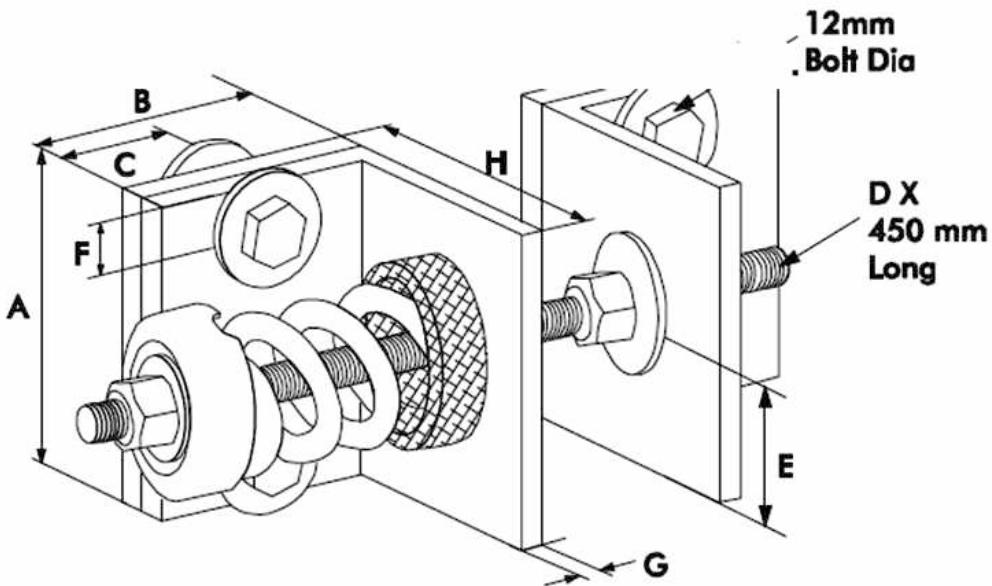

Concrete plinth if any should be at least 200 mm more than the size of base in all directions. In case of installation of snubbers it should be increased to 300 mm.

RESTRAINT MODEL

Specification:

Thrust Restraints shall consist of high deflection, large diameter, laterally stable steel coil springs assembled into rod and angle bracket assembly. Coil springs shall have lateral spring stiffness greater than 1.0 times the rated vertical stiffness to assure coil stability. Coil springs shall provide a minimum of 50% overload deflection capability to solid capacity. Coil springs shall be epoxy powder coated. Thrust Restraints shall include threaded bracket angels, bracket back-up plated, and shall include primer painted fan and ductwork mounting. Thrust Restraints shall be Model SITR as manufactured by Saketh Industries.

DOUBLE ARCH EXPANSION JOINTS

- Greater Movement (Almost Double of Single Arch)
- Higher Pressure
- No gaskets required
- Absorbs & Isolates Vibrations/Noise/Shock
- Reduces Systems Noise
- Absorbs Pipe Movement/Stress
- Compensates for Misalignment/Offset

- Measurements are subject to 5% tolerance.
- To achieve good results do not over load fitting more than designed parameters as per drawing / catalogue

HOW A RUBBER EXPANSION JOINTS WORKS

The purpose of an Expansion joints in general, regardless of design or materials of construction, is to provide a point of flexibility in a piping or duct system in order to absorb the growth of the piping due to thermal changes in the media and/or the environment, and to absorb the dynamic movements of machinery, buildings and structures that the piping is attached to or a part of.

The Rubber Expansion joints, because of the non-metallic nature of its construction, offers the piping and ductwork designer advantages within the temperature and pressure ranges of these joints, which cannot be matched by all metal expansion joints.

Consisting of flanged ends and a flexible section, much the same as a flanged metal bellows, the rubber expansion joints can absorb within its free length more movements, particularly lateral, than any other joint of similar overall size and pressure rating.

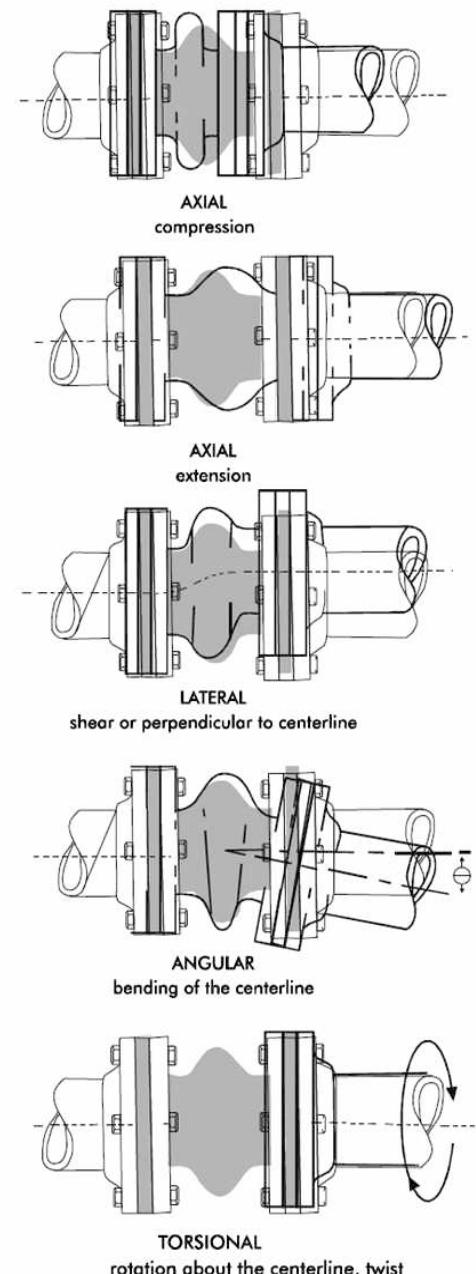

The flexible section of a Rubber Expansion Joints is most often a single convolution, which, because of the inherent flexibility of the material, can accept large lateral movements with low force, phenomena which requires multiple convolutions in metal bellows. During axial and

Angular movements, the rubber convolution deflects much the same way that the metal convolution does. The limits of these motions are determined by the geometric shape and size of the convolution and the inherent pressure resisting capacity of the design.

The manner in which the pressure loads are resisted in a Rubber Expansion joints is the major difference between Rubber and Metal Bellows. Circumferential (hoop) loads due to pressure are carried by the convolution itself in metallic bellows. In a Rubber Expansion joint, the convolution is basically incapable of resisting pressure by itself, but is supported by the adjacent rubber tube with its internal fabric and/or fabric – metal reinforcing, or by the attachment flanges themselves.

All Saketh's Units have integrally moulded flanges, sized and drilled to much standard flanges. All Rubber Expansion joints require metallic split retaining rings behind the flanges to back up protect the rubber integral flanges. Control rods must be used to protect expansion joints from excessive movement if piping system is not properly anchored and are normally recommended for most piping installations

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good results do not over load fitting more than designed parameters as per drawing / catalogue

METALLIC EXPANSION JOINTS

Bellows are a flexible piping element. The corrugation of the expansion joint is designed to be flexible in order to absorb pipe expansion and contraction due to changes in temperature. The number of corrugation of bellows is decided according to the displacement amount and the expansionary and contracting force that the bellows have to absorb. Bellows have to be strong to the design pressure an operating pressure of piping and pressure and installation and they also have to be flexible to absorb thermal movement. The thrust force of the flow in the piping has to be buttressed by things other than bellows.

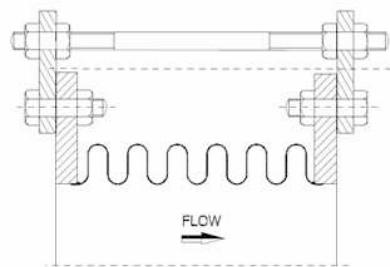

Saketh Industries bellows are fabricated from cylindrical tubes made of high ductility material. The cylindrical body is formed onto parallel corrugation which accommodates all basic movements without encountering wear and tear as associated with conventional mechanical devices. Bellows are designed and manufactured as per the latest additional of EJMA, ASME, GIS, BS, DIN, IS standards under the supervision of highly qualified team of engineers and technocrats.

To attain high flexibility and above average life expectancy, our Bellows are made from tested S.S. 316 / 321 / 304 stainless steel material. These bellows retain the flexibility when subject to internal pressure. Saketh's Industries Bellows have been their outstanding performance in a wide variety of application

- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good results do not over load fitting more than designed parameters as per drawing/catalogue

- Metallic of standard Metallic Bellow SA 240 TP 321, SA 240 TP 304 also available.
- Material of End Flanges IS 2062 Grade 2 (Carbon Steel)
- Custom Made Bellows as per customer specification available for additional movements.
- End flanges as per customer's specification available.
- Accessories like nut bolts / gaskets / tie rods assembly / mating flanges available at extra cost.
- Compliance – Springs designed according to BS 1726 (Part 1) : 1987 and recommendations made by SAE (US)

FLEXIBLE METALLIC HOSE CONNECTIONS

Saketh Industries manufactures Corrugated Hoses and Hose Assemblies at an ultra-modern facility under the supervision of a qualified team of engineers and technocrats. They are suitable for wide range of chemicals, petroleum products, super heated steam, liquefied gas and cooling lines.

Size: 1/4" (6mm) to 12" (300mm)

Temperature: -2000°C to 7000°C

Material: Hose S.S. 3016/321/304, Braiding S.S.304.

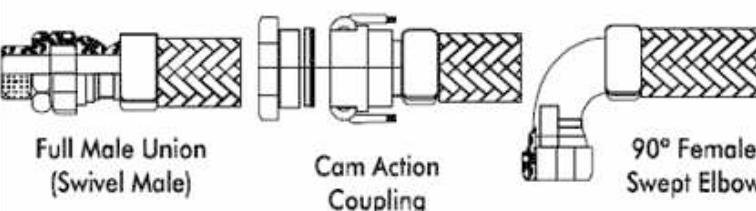

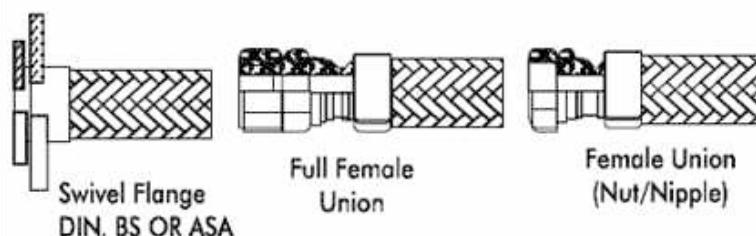

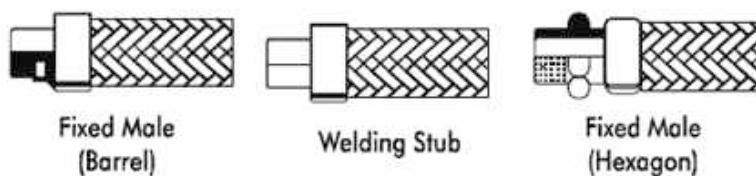

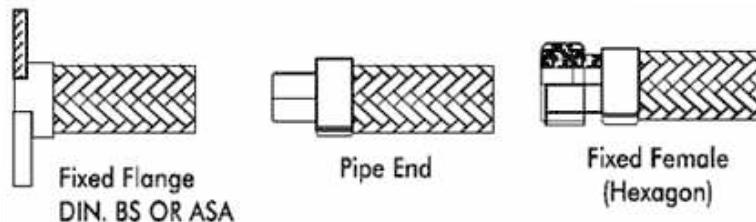

End Connections

Material of End connection: M.S., Carbon Steel, brass, NPTF, METRIC.

Flange: As per BS, ASA, DIN, Slipon, or as per your requirement.

End Fittings:

Manufactured from Mild Steel, Stainless Steel or Brass. These are fitted by Argon welding (TIG) or brazing on S.S. Hose depending upon hose type and service conditions to from a complete hose assembly

- To achieve good results do not over load fitting more than designed parameters as per drawing catalogue

FLEXIBLE METALLIC PUMP CONNECTOR

Application:

Saketh's stainless steel pump connectors have been optimally designed for use in pipe work systems for pumps or compressors and used to suppress noise, absorb vibration, to correct and accommodate for minor lateral misalignment or thermal movements and to adjust for any building settlement.

Construction:

Manufactured with AISI 32 stainless steel corrugated tubing (to BS 6501 pt.1) with AISI 304 stainless steel single over braid & carbon or stainless steel end fittings, TIG welded AISI 304/316 stainless steel Corrugated Hose also available.

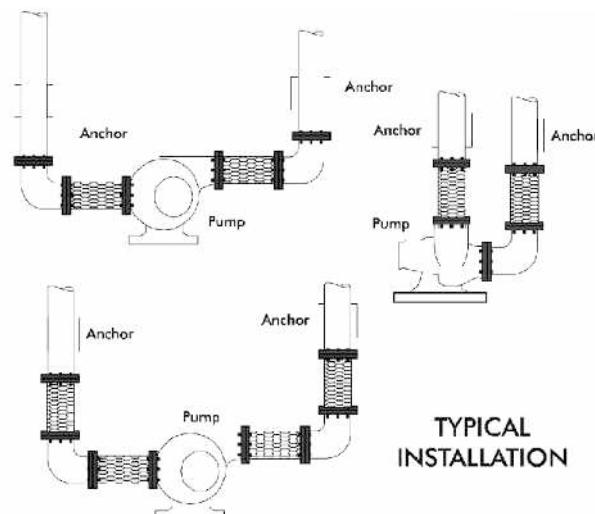

End Fittings:

Screwed assemblies – Threaded BSP Taper Male Hexagon or Half Barrel Fittings Flanged assemblies, to BS10 table D/BS4504 & ANSI/ASA standards.

Installation:

Braided pump connectors are not designed to absorb lateral movements and vibration. For maximum efficiency the connectors should be placed in both the pipe work on the away from the source.

Nominal I.D. of S.S. Braised Bellow	Overall Length Inch/mm	Max. Working Pressure At Room Temp.(PSI)

10"	12"/300	4.5
12"	12"/300	4.5

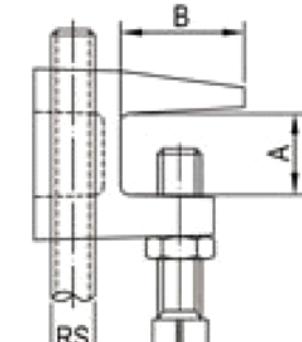

- End flanges as per customer specification available
- Due to policy of continual improvement, the specifications are subject to change without prior notice.
- Measurements are subject to 5% tolerance.
- To achieve good results do not over load fitting more than designed parameters as per drawing / catalogue

Threaded Bar & Accessory

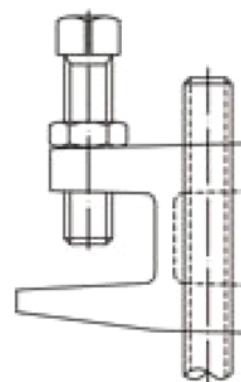

Threaded Bar & Accessory

BEAM CLAMP

TOP

BOTTOM

Size Range:

3/8" and 1/2" or M10 and M12

Material:

Ductile Iron, Hardened Steel cup point set screw and lock nut.

Finish:

Black or Galvanized.

Service:

Structural attachment to top or bottom of metal beams, purlins, channels or angel iron

Approval:

- Complies with Federal Specification A-A-1192A (Type 19 & 23) WW-H-171-E (Type 23) and MSS-SP-69 (Type 19 & 23).
- FM Approved & UL/ULC Listed.

THREADED RODS

Full Threaded Bars

Standards:-

- ASTM/ASME/BS/DIN/BS EN ISO /JIS

Material:-

- Mild Steel, Carbon Steel, Alloy Steel & Stainless Steel.

Size Range:-

- M6 to M100 in metric series
- $\frac{1}{4}$ " to 4" in imperial

Threads:-

- UNC, 8UN, UNF, Metric Coarse and Metric Fine

Typical Grades & Standards:-

- ASTM A193 Grade B7, B7M, B8, B8M & B16
- ASTM A320 Grade L7 & L7M
- Stainless Steel 304, 304L, 316, 316L, A2-70/80, A4-70/80
- BS 3692 / BS 4190 grade 4.6, 4.8, 5.6, 5.8, 8.8

Any other specific grade can be manufactured upon request with short lead times.

Ordering Information:-

- Dimensions - Dia and Length.
- Standard and Grade
- Finish (Black, GI, Yellow, HDG, Cadmium, Nickel, PTFE etc)

STUD BOLTS

Full Threaded Studs and Engineering Studs

Standards:-

- ASTM/ASME/BS/DIN/BS EN ISO /JIS

Material:-

- Mild Steel, Carbon Steel, Alloy Steel & Stainless Steel.

Size Range:-

- M6 to M100 in metric series
- $\frac{1}{4}$ " to 4" in imperial

Threads:-

- UNC, 8UN, UNF, Metric Coarse and Metric Fine

Typical Grades & Standards:-

- ASTM A193 Grade B, B7M, B8, B8M & B16
- ASTM A320 Grade L7 & L7M

Any other specific grade can be manufactured upon request with short lead times.

Ordering Information:-

- Dimension - Dia and Length.
- Standards and Grade
- Finish (Black, GI, Yellow, HDG, Cadmium, Nickel, PTFE etc)
- Nut and washer quantity.

ANCHOR BOLTS

Anchor bolts, Foundation bolts, holding down Bolts, U Bolts, sag Rods & Tie Rods can be manufactured as per customer's drawing and as per grade required.

Standards:-

- ASTM/ASME/BS/DIN/BS EN ISO /JIS

Material:-

- Mild Steel, Carbon Steel, Alloy Steel & Stainless Steel.

Size Range:-

- M6 to M100 in metric series
- ¼" to 4" in imperial

Threads:-

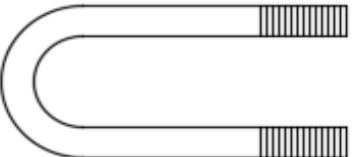

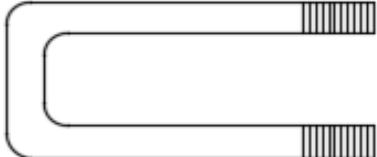

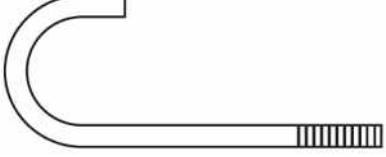

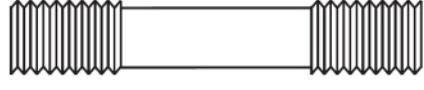

- UNC, 8UN, UNF, Metric Coarse and Metric Fine
- Typical Grades & Standards:-
- BS 3692 / BS 4190 grade 4.6, 4.8, 5.6, 5.8, 8.8, 10.9 and 12.9
- ASTM A307, A325, A193, B7 & B16, ASTM A320 L7
- Stainless Steel 304, 304L, 316, 316L, A2-70/80, A4-70/80, ASTM A193 Grade B8 & B8M
- ASTM A675 Grade 90, ASTM A572 Grade 50 and ASTM F1554 grade 36, 55 and 105

Any other specific grade can be manufactured upon request with short lead times.

Ordering Information:-

- Dimensions.
- Standard and Grade.
- Finish (Black, GI, Yellow, HDG, Cadmium, Nickel, PTFE etc.)
- Nut and washer quantity
- Plate and sleeve dimensions (if required).

Specially Manufactured Items:-

	'U' Bolts Grip and Non Grip Type	N.B. (1/2") M15-(24") M600 DIA. Bar Size Range (1/4") M6 - (4") M100
	Square Bend 'U' Bolts	Bar Size Range (1/4") M6 - (4") M100
	'J' Foundation Bolts	Bar Size Range (1/4") M6 - (4") M100
	Double Ended Engineer Studs	Bar Size Range (1/4") M6 - (4") M100
	Waisted Double Ended Engineer Studs	Bar Size Range (1/4") M6 - (4") M100
	Tie Bars & Foundation Bolts	Bar Size Range (1/4") M6 - (4") M100

- All products are available with the appropriate grades of nuts and washers
- All forms of plating and coating can be carried out

HEX BOLTS

Hex Head and Heavy Hex Head in Full and Partial Threading

Standards:-

- ASTM/ASME/BS/DIN/BS EN ISO /JIS

Material:-

- Mild Steel, Carbon Steel, Alloy Steel & Stainless Steel.

Size Range:-

- M6 to M64 in metric series
- $\frac{1}{4}$ " to $2\frac{1}{2}$ " in imperial
- Bigger sizes can be manufactured as per order.

Threads:-

- UNC, 8UN, UNF, Metric Coarse and Metric Fine

Typical Grades & Standards:-

- BS3692 / BS4190 grade 4.6, 4.8, 5.6, 5.8, 8.8, 10.9 and 12.9
- ASTM A307 Grade A and B
- ASTM A325
- ASTM A193 Grade B7, B7M, B8, B8M & B16
- ASTM A320 Grade L7 & L7M
- Stainless Steel 304, 304L, 316, 316L, A2-70/80, A4-70/80

Any other specific grade can be manufactured upon request with short lead times.

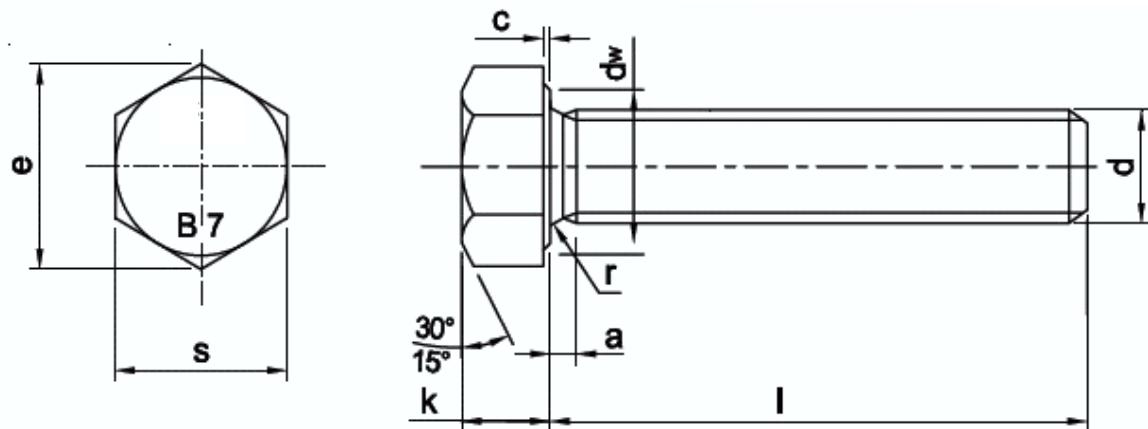

Ordering Information:-

- Dimensions – Size Dia and Length.
- Standards and Grade
- Finish (Black, GI, Yellow, HDG, Cadmium, Nickel, PTFE etc)
- Nut and washer quantity

SOCKET SCREWS

Socket Screws are also known as Allen Head Bolts and are fastened with a hex Allen wrench. Socket Screws are available in various head styles and materials.

Standards:-

- DIN/BS EN ISO

Material:-

- Alloy Steel & Stainless Steel (304, 304L, 316, 316L)

Size Range:-

- M5 to M24 in metric series
- Bigger sizes can be manufactured as per order.

Threads:-

- Metric Coarse and Metric Fine

Typical Grades & Standards:-

- A2-70/80, A4-70/80
- DIN 912
- DIN 7991
- ISO 7380

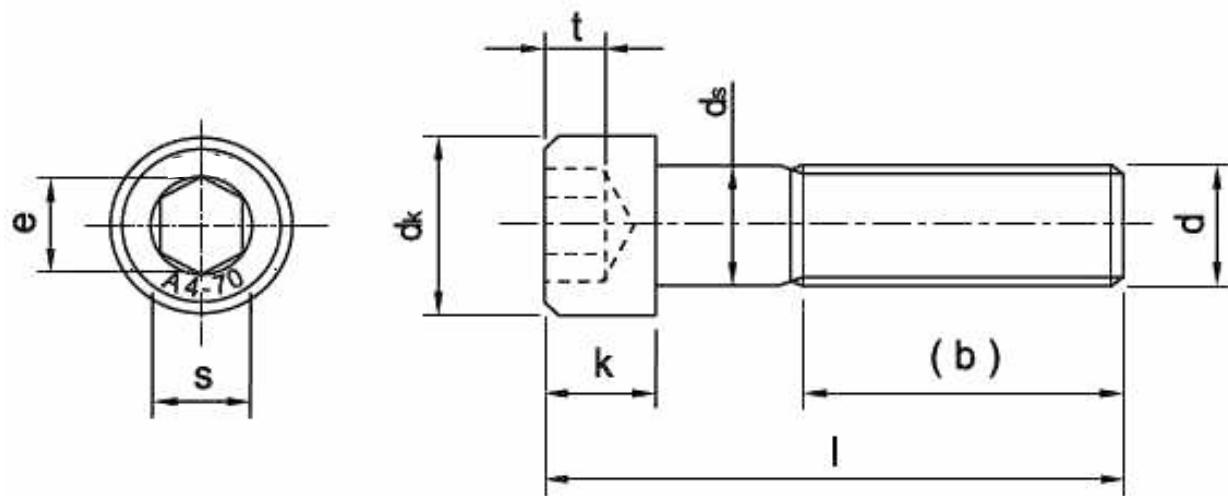

Any other specific grade can be manufactured upon request with short lead times.

Ordering information:-

150mm x 150mm x 102mm Fits Inside 4" Pipe
109mm x 109mm x 78mm Fits Inside 3" Pipe
79mm x 79mm x 51mm Fits Inside 2" Pipe
63 mm x 63 mm x 38 mm Fits Inside 1.1/2" Pipe

Thumb Type

FLOOR DRAINS

Shower Channel Drains

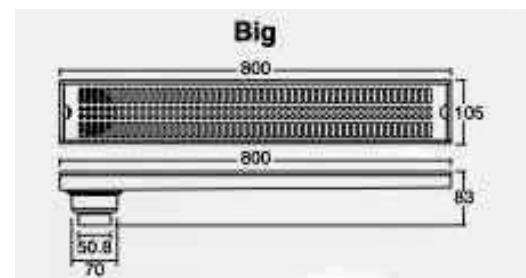

This channel drain is manufactured using the finest quality material in conformity with the international quality standards. The offered channel drain finds immense application in residential and commercial sectors. Available in multiple specifications, this is admired for the features like durable nature, high strength, dimensional accuracy, corrosion resistance, etc.

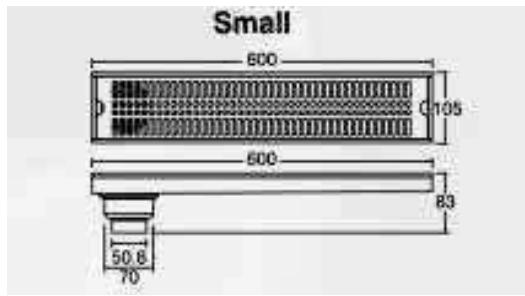

Overall Size:

915 x 105 x 83mm (36 x 4 x 3.1/4 Inch)

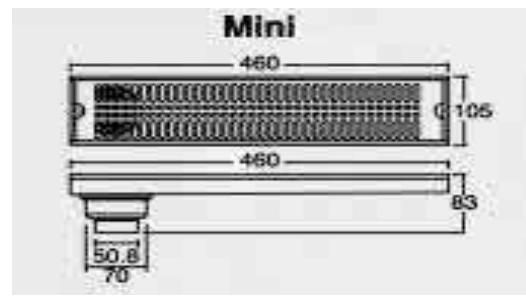

Overall Size:

800 x 105 x 83mm (31.1/2 x 4 x 3.1/4 Inch)

Overall Size:

600 x 105 x 83mm (23.1/2 x 4 x 3.1/4 Inch)

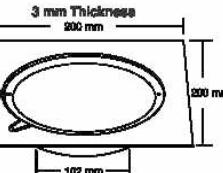

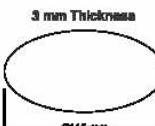

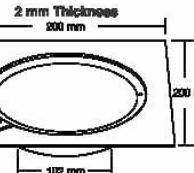

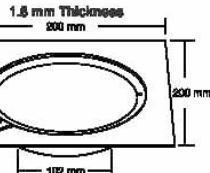

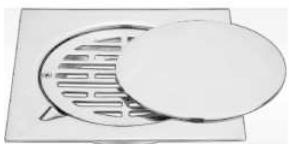

Overall Size:

460 x 105 x 83mm (18 x 4 x 3.1/4 Inch)

108Q - 250PSI AWWA C509 Flanged X Grooved-End Gate

- Bolted Bonnet • Non-Rising Stem • Resilient Wedge • Flanged X Grooved-End
- 250 PSI/17.2Bar Non-Shock Cold Working Pressure
- Conforms to AWWA C509
- FBE Coated Interior and Exterior
- Maximum Operating Temperature 185°F /85°C
- FM Approved & UL/ULC Listed

Check Valve Performance Data

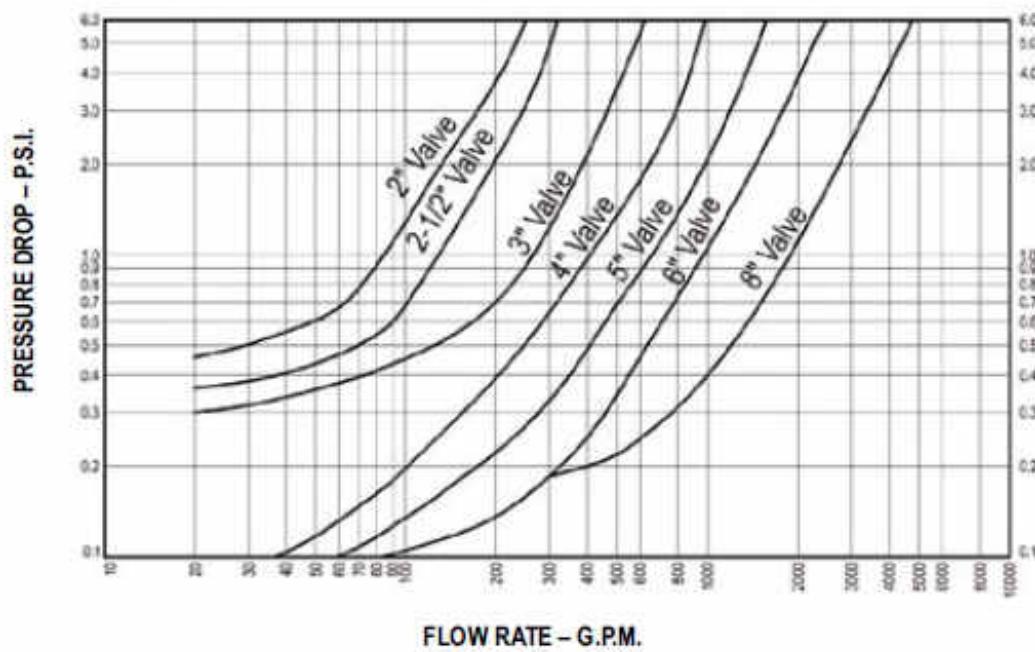

$$P = \frac{Q^2}{C_V^2} \Delta P$$

$$\nu \sqrt{\Delta P} \propto C = Q$$

Where:
 Q = Flow rate (gallons per minute: GPM)
 ΔP = Pressure drop across valve (PSI)
 C_V = Flow coefficient

Flange Standard:

ASME 16.5 Class 150

BS 4504 PN10 / Pn16

AS 2129 Table D / Table E

Pn25 VBG01 H Grooved-End Butterfly Valve

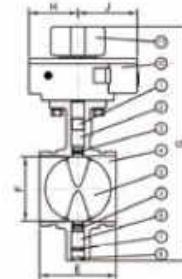

- FM Approved Gear Operator for both Indoor or Outdoor use
- NSF Certified Polymide Coated Ductile Iron body for Excellent Protection
- Elastomer Encapsulated Disc with Outstanding Flow Characteristics
- Extended Neck
- Low Torque Operation
- Options of Double Internal Supervisory Switches

Material Specifications

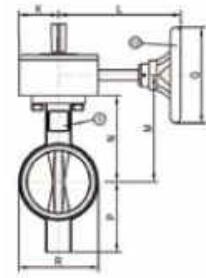

Part	Specification	
1 Upper Stem	Stainless Steel ASTM A 276 Type 420	
2 Upper Bearing	PTFE Bronze Sintered on Steel	
3 O-Ring	EPDM	
4 Body	Ductile Iron ASTM A 536, Polymide Coated	
5 Disc	Ductile Iron ASTM A 536 with EPDM Encapsulation	
6 Lower Bearing	PTFE Bronze Sintered on Steel	
7 Lower Stem	Stainless Steel ASTM A 276 Type 420	
8 Dust Plug	PVC	
9 Name Plate	Stainless Steel	
10 Gear Operator	Cast Iron and Steel

300PSI VSG01 Grooved-End Y Type Strainer

- Installed in both Horizontal or Vertical Line with Upward Flow
- Easier and Faster to Maintain and Install
- Low Pressure Drop

Material Specifications

1. Body: Ductile Iron ASTM A 536

Standard Surface Finish: FBE coated interior and exterior

Standard Color: Red RAL3000 | Blue RAL5015

Option: Hot dip galvanized

2. Screen: Stainless Steel 304, Perforated metal

Standard: 2 - 3"(DN50 - 80): 0.062"(1.6mm) diameter perforations.

4 - 12"(DN100 - 300): 0.125"(3.2mm) diameter perforations.

Option: 2 - 12"(DN50 - 300): 0.315"(8mm) diameter perforations.

Other perforation available upon request

3. Grooved Coupling:

Housing: Material: Ductile Iron ASTM A 536

Standard Surface Finish: Hot dip galvanized

Other material or finish available upon request

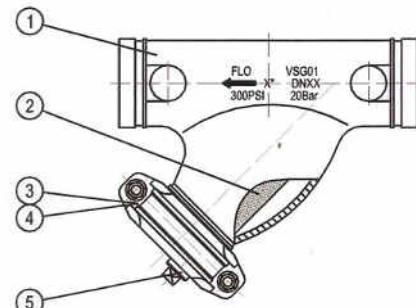

Rubber Gaskets:

Standard:

Grade "E" EPDM (Color code: Green stripe)

Temperature range -30°F to +230°F (-34°C to +110°C).

Recommended for cold and hot water service within the specified temperature range plus a variety of dilute acids, oil-free air and many chemical services. NOT

RECOMMENDED FOR PETROLEUM SERVICES.

Option:

Grade "T" Nitrile (Color code: Orange stripe)

Temperature range -20°F to +180°F (-29°C to +82°C). Recommended for petroleum products, air with oil vapors, vegetable and mineral oils within the specified temperature range. Not recommended for hot water services over +150°F (+66°C) or for hot dry air over +140°F (+60°C).

Other material available upon request

Bolts/Nuts: Heat treated carbon steel zinc electroplated to ASTM B-633, track head conforming to physical properties of ASTMA-183 minimum tensile 110,000 psi/758340 kPa.

4. Grooved Cap: Ductile Iron ASTM A 536

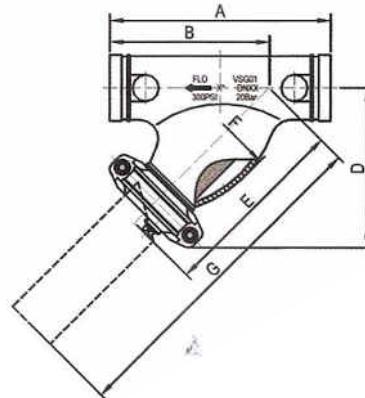

Standard Surface Finish: Hot dip galvanized, Other material or finish available upon request

5. Plug: Malleable Iron ASTM A 197 / A 47

Standard Surface Finish: Hot dip galvanized

Threaded: NPT pipe threaded, Other threaded available upon request
